

Do you want to protect your child against Meningitis?

We are looking for:

Healthy teenage boys and girls who are going into Grade 7.

The study involves:

Participants will receive the MenACWY vaccine. There will be 3 visits to the study clinic over the course of one year. These visits will include a physical exam, vaccination, blood tests, and questions about your child's health.

Why we are doing the study:

Meningococcal disease is caused by *Neisseria meningitidis* and can result in very severe disease such as sepsis (blood infection) and meningitis. There are currently 3 different vaccines being used across Canada and doctors want to know if any of them are better than the others.

You will receive:

Eligible participants will be reimbursed for travel/parking & receive a gift card at each visit.
